Description

What can you do with this file?

I forgot the key to my safe but this [file](#) is supposed to help me with retrieving the lost key. Can you help me unlock my safe?

Hints ?

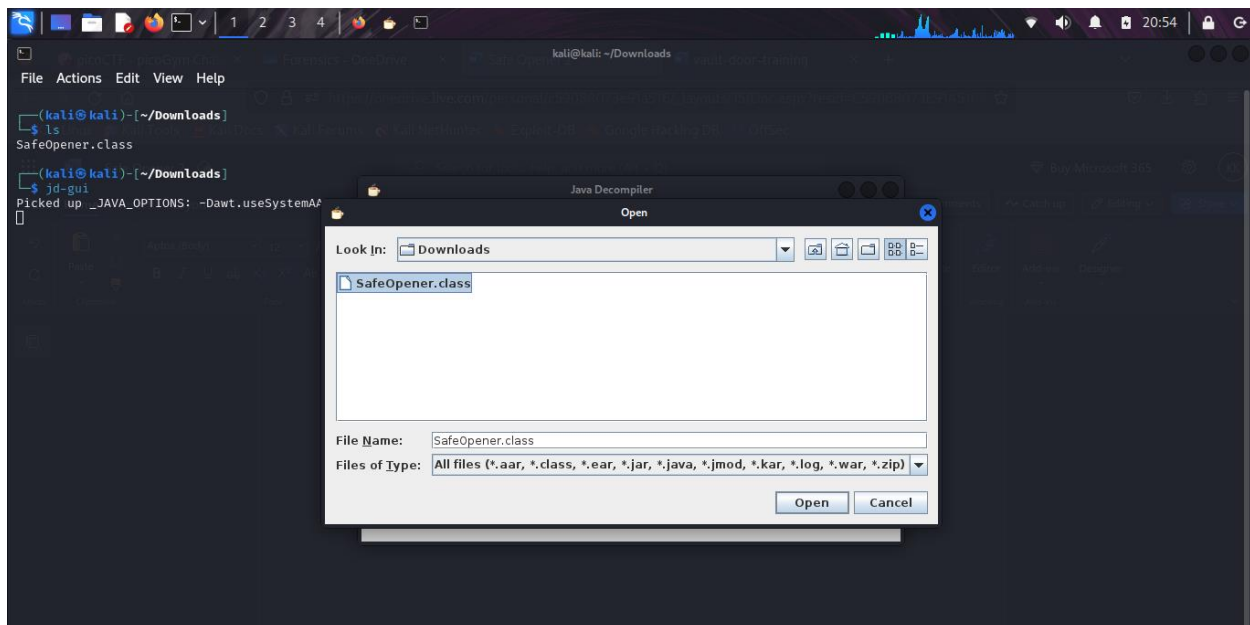

1

Download and try to decompile the file.

Solution

I downloaded the java compiled program first then used **jd-gui** to decompile the compiled program back to source code.

I installed the decompiler by running the following command first **sudo apt install jd-gui**

And the flag was just stored as text within the code
