Solution

The challenge **description**, **title** and **Hints** directed me to investigating the robots.txt file before anything else. Robots.txt file should not be accessed by the general public in a well secured site.

I went ahead and tried accessing the robots.txt file on my bowser which revealed another page that existed in the site " /1bb4c.html".

I tried accessing the page " /1bb4c.html" which revealed the flag "

picoCTF{ca1cu1at1ng_Mach1n3s_1bb4c}".
